

## VETASI ENHANCES ITS MOBILE SOLUTION WITH IBM WORKLIGHT

By Tony Turner, Projects Director

According to Gartner, mobile application development projects for smartphones and tablets will outnumber native PC projects by a ratio of 4:1 by 2015. At Vetasi we've seen evidence of this trend first-hand with more and more customers enhancing their Maximo platforms using the latest mobile solutions.

### Introducing IBM Worklight

Following SAP's acquisition of Syclo, many Maximo users have been unsure which way to go, as previous implementations of Maximo Mobile have had a somewhat chequered history. However, the good news is that with the arrival of IBM Worklight, Maximo customers can now access a leading edge mobile solution.

Acquired by IBM in 2012, the Worklight mobile application development platform is being used by IBM to host the IBM Maximo Anywhere suite of Mobile Applications, which began with the Maximo Anywhere Work Manager at the end of last year. However, Worklight is also a very powerful tool to develop non-Work Management applications, either for use as a standalone system, or as a mobile front end to other enterprise applications.

### The benefits

One of the key benefits of Worklight is its ability to work in both connected and disconnected modes, as well as support many different devices from a single code set. Furthermore, IBM Worklight can help reduce both application development and maintenance costs, improve time-to-market, as well as enhancing mobile application governance and security.

### Mobile expertise

Vetasi has many years' experience in implementing mobile solutions for Maximo and most recently completed a major mobile deployment for Heathrow Airport Ltd using IBM Worklight. This project represents a significant breakthrough in delivering what we believe to be the most enhanced Maximo mobile solution yet.

Our consultants are geared up to work with IBM Worklight; both in terms of supporting and enhancing the IBM Maximo Anywhere products, but also for application development of non-Work Management requirements.

By using IBM Worklight, our team can rapidly develop robust mobile solutions which work across a range of different devices to deliver a very cost effective solution. Aside from the core EAM Work, Asset & Inventory Manager applications, we can also deliver a range of other applications specific to organisational needs.

For more information on IBM Worklight or Maximo mobile solutions, please contact your Engagement Manager, or e-mail [sales@vetasi.com](mailto:sales@vetasi.com).
